

FlexPay™ Global Contactless Module

Consumers are evolving to adopt to the latest and most convenient trends, including mobile payments...and so should your store!

By adding a contactless reader with Near Field Communication (NFC) technology to your dispenser, you are providing your customers an opportunity to pay with a simple tap of their phones.

FlexPay™ Global Contactless Module

The Global Contactless Module conforms to ISO specifications and is seamlessly integrated with CRIND to accept all standard forms of secure contactless payments methods including:

- VISA Tap to Pay
- Apple Pay®
- Android Pay™
- Other Dual Interface Cards (EMV & NFC)

With the migration to EMV and chip card technology in the U.S. and Canada, transaction times can be longer than the traditional card swipe. Adding contactless readers to your forecourt can improve transaction times and create a better consumer experience.

The FlexPay Global Contactless Module is easy to use and can be installed on any FlexPay II or Flexpay IV CRIND. It's rugged design features impact and tamper resistance for the highest levels of protection.
